

Dredge Research Collaborative

SUMMER INTERNSHIP 2017

The Dredge Research Collaborative is seeking summer intern-collaborators to study and document sediment management and design practices across America's four coasts.

The 2017 internship will begin the first week of June, where interns will work in New York City with DRC members and participate in an 8-week visual research and publication production workshop. Summer work will synthesize research and ideas explored in past Dredge Research Collaborative events for publication. The summer work will culminate in a book scheduled to be released in Fall of 2018.

The internship is a paid position and will meet three to four days a week in Brooklyn, NY from June 01 to July 31. Summer intern-collaborators have the opportunity to interact with a national network of landscape architects, architects, and writers interested in sediment practices.

Our ideal candidates are current students or recent graduates in landscape architecture, architecture, urban design, graphic design, and related disciplines. Applicants should be self-motivated, collaborative, and have strong visual research and drawing skills. Graphic design skills are a positive.

To apply, send a cover letter, resume, and work samples to genevawirth@gmail.com with the subject line 'DRC Internship Application 2017.' Applications should not exceed 10 MB. Applications will be accepted and reviewed on a rolling basis until **April 24th at 5pm.**

The Dredge Research Collaborative is an independent 501c3 nonprofit organization which investigates human sediment handling practices, through publications, an event series, and various other projects. The organization's mission is to advance public knowledge about sediment management; to provide platforms for transdisciplinary conversation about sediment management; and to participate in envisioning and realizing preferred sedimentary futures.
